for the shower enclosure

WHITEWATER

RAVAK®

Description of Controls Whitewater

Thermostatic water mixer tap serves for setting the optimal temperature of water. It comes equipped with safety-lock set at 38°C to prevent scalding.

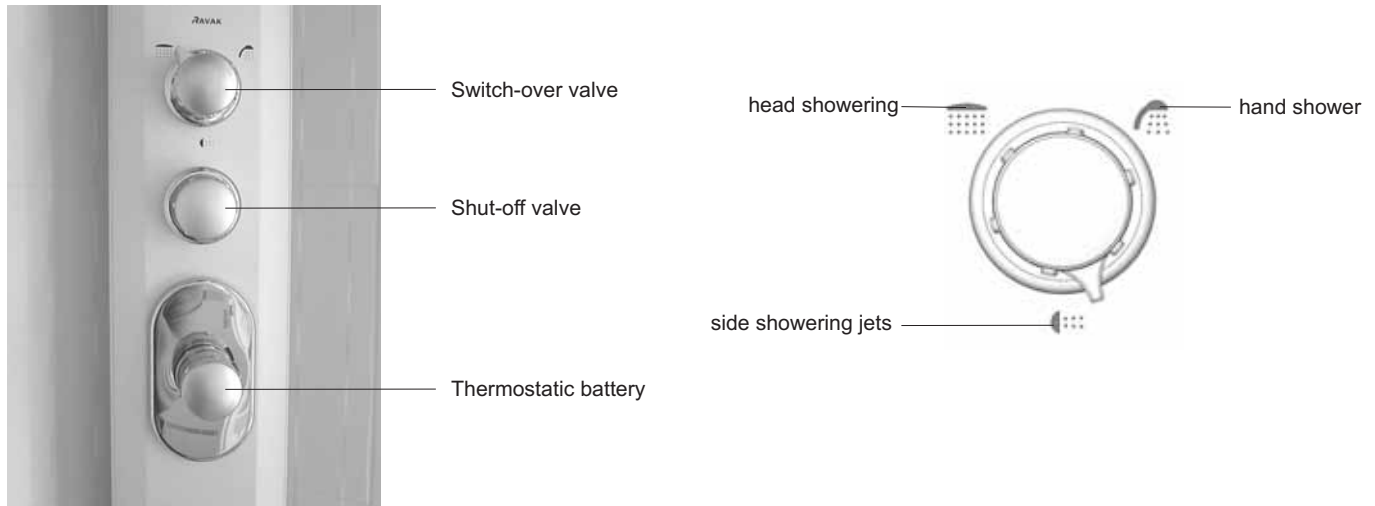

Water supply control regulates the water flow coming into the system.

Function-switching control enables the user to choose between the head shower, hand shower (normal/jet), and side showering jets.

Showering set includes a flexible shower hose with a click-fit connecting piece to fix the showerhead in. The showerhead can also be fixed on the shower sliding rod, offering good height adjustment of the holder. The screw on the holder facilitates loosening or tightening of the showerhead in the optimal position.

The water flow emitting from the hand shower can be adjusted: either normal shower, or massaging stream.

Angle of the side showering jets can be adjusted within a 15° angle each way.

ATTENTION!

To keep the correct function of the head shower, clean the bottom side of the rose head with the openings approximately once per month using a soft brush. If furring is formed, wash the rose head surface with a warm vinegar water.

No mechanical abrasives (e.g. abrasive pastes) or aggressive chemicals (e.g. thinners, acetone) are permitted for cleaning the product. The manufacturer is not responsible for any damages caused by careless installation, usage or maintenance of the product. Maintenance is to be done only by wiping the painted parts and glass or plastic pieces clean using special cleansers.

The manufacturer recommends using the RAVAK ANTICALC cleansers:

RAVAK ANTICALC CONDITIONER complete care for the Ravak Anticalc protective treatment of the product surfaces.

RAVAK CLEANER - removes old dirt deposits from the glass surfaces, shower box frames, acrylic bathtubs, washbasins, and water taps.
